COMPANY PROFILE

Guangdong Nafei Industrial Co., Ltd.

Disposable menstrual pants, sanitary pads and pantyliners for OEM and private label

Shanwei, Guangdong, China · hnnafei.com

WHO WE ARE

A feminine hygiene manufacturer in Shanwei, Guangdong

Guangdong Nafei Industrial Co., Ltd. manufactures disposable menstrual pants, sanitary pads and pantyliners for brand owners, distributors, wholesalers and retailers outside China. The company was founded in 1998 and runs its production base in Shanwei, Guangdong.

We work on two tracks. One is a range of existing product models that can be branded and packed for a first order. The other is OEM and private-label development, where construction, size, pack count, wrapper and carton are set against the buyer's specification.

Entity	Guangdong Nafei Industrial Co., Ltd.
Location	Shanwei, Guangdong, China (516600)
Founded	1998
Core lines	Disposable menstrual pants · sanitary pads · pantyliners
Business model	OEM · private label · existing product supply
Export contact	Li Genyuan, Foreign Trade Manager

THREE WAYS BUYERS START

Most first orders begin in one of these three shapes. The route decides how much development work sits before the first production run.

Existing model

Pick a current model, brand the pack and confirm the order. Fastest route to a first shipment.

Private label

Keep the construction, change artwork, pack count and carton. Suits retailers and online sellers.

OEM development

Change construction, size, core or materials against a brief. Needs a sample round before pricing is fixed.

PRODUCTS

What we make

Disposable menstrual pants

Pull-up and side-opening constructions.
Light, cooling, dry and thin, and stretch-fabric options.
Size and waist range set by model; pack count by project.

Sanitary pads & pantyliners

Standard hot-air, bamboo-fiber, organic cotton and soft topsheet constructions.
Nominal length, absorbency core and wrapper chosen per series.
Retail bag, individual wrapper and carton plan agreed at quotation.

Product construction, available sizes and pack formats vary by model. The current sample and written specification are the reference for any order, not a catalogue picture.

PRODUCTION BASE

Where the product is made

Converting line inside the Shanwei production base.

Production runs on automated converting equipment in a dust-controlled workshop. Materials are received against specification, converting is monitored in line, and finished packs are checked before cartoning. Product development and sample making sit with the same production team, so a change agreed on a sample can be traced into the production order.

Sampling, material specification, artwork, quotation and the production plan are confirmed in writing before an order is released. Where a project needs a specialist process outside our lines, it is handled by a named manufacturing partner and the scope is stated in the quotation.

QUALITY & COMPLIANCE

What we can evidence

Buyers usually ask for three things before a first order: a management system certificate, a product test report for the exact construction being quoted, and a clear statement of who manufactures what. We answer all three in writing.

Management systems	ISO 9001, ISO 14001, ISO 45001
Workshop practice	GMP workshop management
Product testing	Report for the quoted construction, issued by a third-party laboratory
Document scope	Documents are matched to the model, size and material actually quoted

We do not describe our products as medical devices, sterile, antibacterial or therapeutic. Where a market requires a specific registration or labelling statement, it is agreed in writing before production and is the buyer's responsibility to confirm for their own market.

WHAT COMES WITH A QUOTATION

Specification sheet

Construction, size, absorbency core, topsheet, backsheet, pack count — the exact version being priced, not a range.

Sample reference

One approved sample version. Later feedback is folded into that single reference so production has one target.

Packing & carton plan

Individual wrapper, retail bag or box, carton quantity and carton dimensions, agreed before artwork is finalised.

Document list

The certificates and test reports that apply to the quoted construction, with the scope and date of each document.

WORKING TOGETHER

From brief to delivery

1. Brief

Target market, product type, size or length, absorbency expectation, pack count, quantity and delivery destination. A reference sample helps more than a description.

2. Proposal & quotation

Product model or OEM direction, material options, packaging route, minimum quantity and price basis. Scope is written down, including what is and is not included.

3. Sample

A sample is made against the agreed specification. Feedback is consolidated into one version so production follows a single approved reference.

4. Order & production

Artwork, specification and production plan are confirmed before release. In-line checks run during converting and packing.

5. Inspection & shipping

Pre-shipment check against the approved sample and packing list. Export documents, customs clearance and transport are coordinated.

6. After-sales

Delivery confirmation, feedback capture and follow-up on any quality question with the production team.

CONTACT

Send your brief

Tell us the product, the market, the quantity and the packing you have in mind. If you already have a sample or a specification sheet, send it with the enquiry — it shortens the first reply.
